

Sound Settings in Zoom

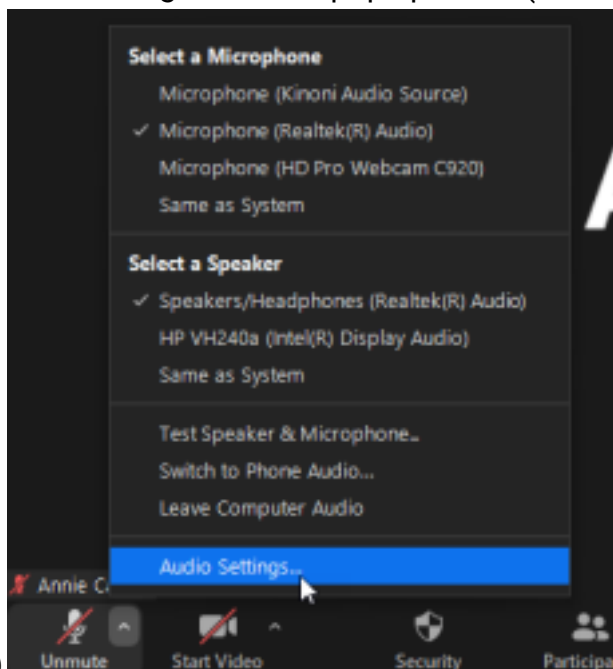

First things first, please update Zoom on your computer.

<https://support.zoom.us/hc/en-us/articles/201362233-Upgrade-update-to-the-latest-version>

From the Zoom window, open your **Audio Settings** by clicking on the little up arrow next to your microphone icon in the lower left corner of the zoom window.

Select Audio Settings from the pop up menu (it'll be at the

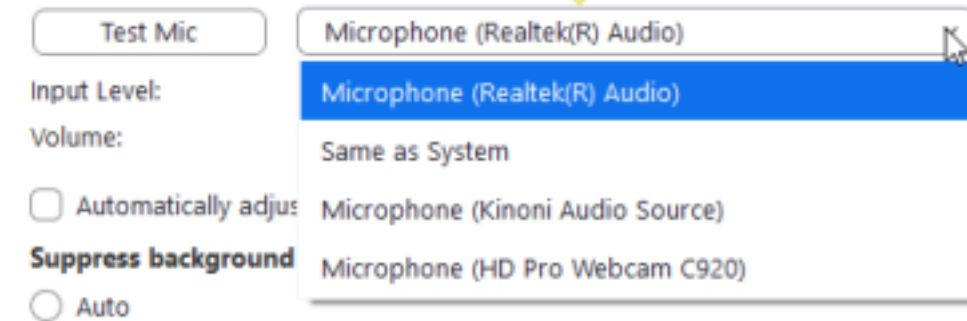

bottom)

In the Audio settings window, make sure you've selected the correct Speaker and Microphone. If you're using an interface, the volume will be controlled by the interface. If you're just using a USB microphone, you'll be adjusting your volumes here. **You'll need to understand this part for your sound check.**

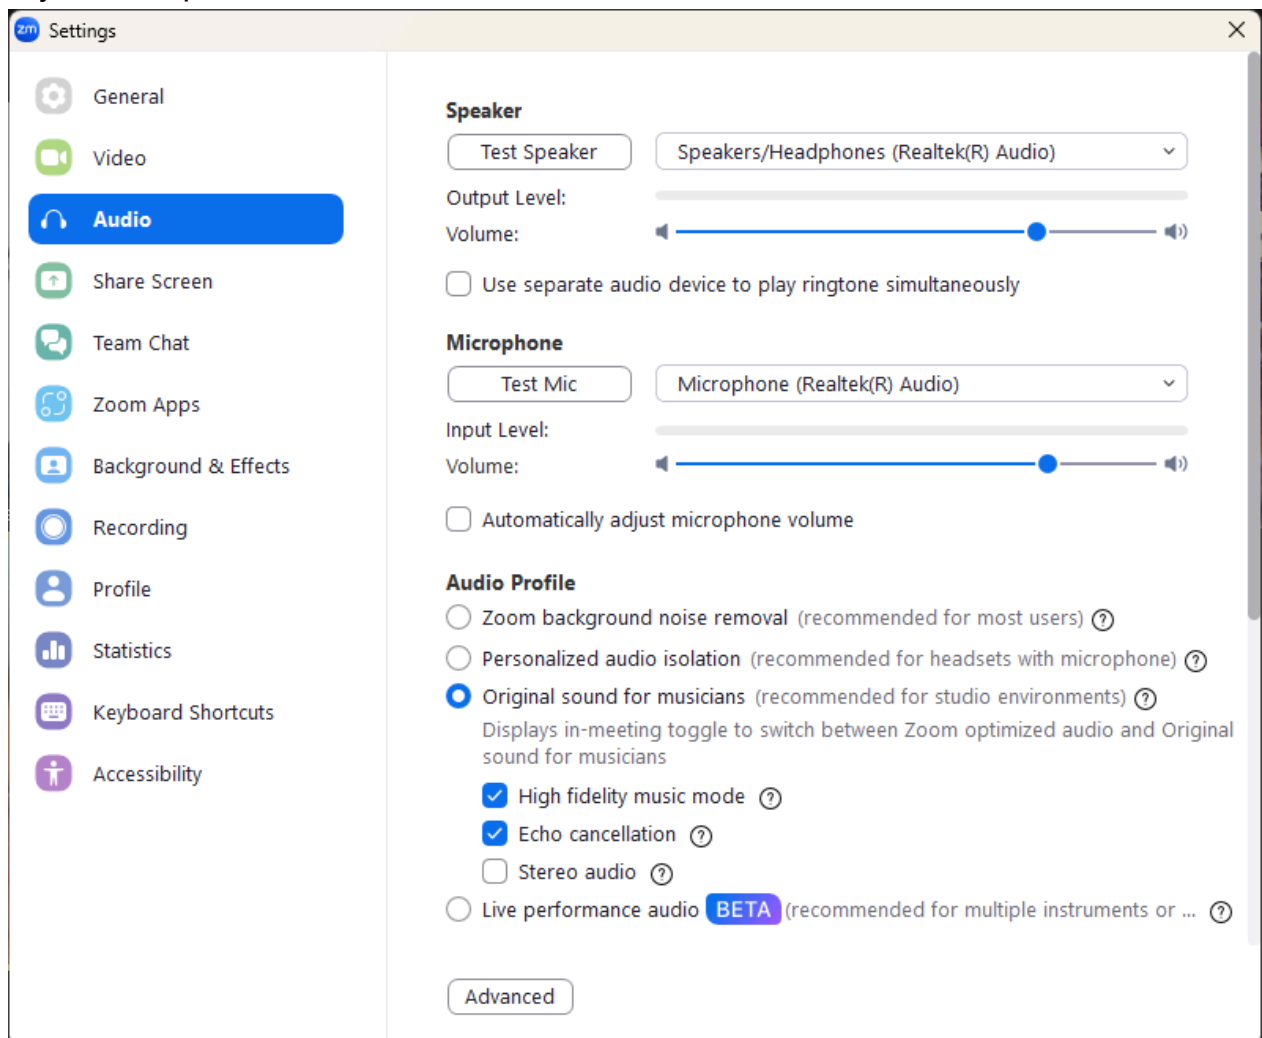

Not hear the test sound, select a different speaker.

Not hear your voice, select a different microphone.

Under your Microphone volume, make sure to **UNCHECK** the box next to Automatically adjust microphone volume.

This is what your audio settings should look like.

Audio Profile

- Zoom background noise removal (recommended for most users) ?
- Personalized audio isolation (recommended for headsets with microphone) ?
- Original sound for musicians (recommended for studio environments) ?
Displays in-meeting toggle to switch between Zoom optimized audio and Original sound for musicians
 - High fidelity music mode ?
 - Echo cancellation ?
 - Stereo audio ?
- Live performance audio **BETA** (recommended for multiple instruments or ... ?)

If you need reasons for all this, you can find Youtube videos that explain it. =)

Once you've double-checked these settings, close the settings window. And you should see in the upper left corner a button that says **Original Sound for Musicians: On**. If it says Original Sound: Off, click once to turn it on. Yes, it should say "On"
